

S.No: 1	Exp. Name: Write a Java program to Display Default values of all Primitive data types	Date:2023-09-05
---------	--	-----------------

Aim:

Write a **java** program to display the default values of all primitive data types.

Write a class `PrimitiveTypes` with `main(String[] args)` method.

Write code to produce the below output:

```
byte default value = 0
short default value = 0
int default value = 0
long default value = 0
boolean default value = false
double default value = 0.0
float default value = 0.0
```

Note: Please don't change the package name.

Source Code:

`q10815/PrimitiveTypes.java`

```
package q10815;
class PrimitiveTypes
{
    static byte b;
    static short s;
    static int i;
    static long l;
    static boolean b1;
    static double d;
    static float f;
    public static void main(String args[])
    {
        System.out.println("byte default value = "+b);
        System.out.println("short default value = "+s);
        System.out.println("int default value = "+i);
        System.out.println("long default value = "+l);
        System.out.println("boolean default value = "+b1);
        System.out.println("double default value = "+d);
        System.out.println("float default value = "+f);
    }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
byte default value = 0

short default value = 0
int default value = 0
long default value = 0
boolean default value = false
double default value = 0.0
float default value = 0.0
